Need to know for retailers

- Compact headphone amplifier designed with real players in mind, featuring intuitive hardware controls for fast adjustments and a mobile app that evolves with new features.
- Unlocks a world of amps, cabs, mics, pedals, and artist signature sounds, offering users unlimited tonal possibilities in a pocket-sized format.
- Exclusive 'In The Room™' technology delivers an authentic amp feel in headphones, making every note sound dynamic and alive—stands out from traditional IR-based solutions.
- Dynamic Light Beam display, SpeedDial, and XpressFX provide fast, hands-on tone shaping and easy adjustment of effects for an inspiring and responsive playing experience.
- Studio-quality headset mic input with onboard reverb lets users record both guitar and vocals anywhere, while Bluetooth and community features keep users engaged and sharing new sounds.

- Firmware updates via the BEAM app for continuous feature enhancements
- Designed by Blackstar Amplification in the UK

Description

Blackstar is thrilled to unveil the BEAM: SOLO Headphone Amplifier, a compact, dynamic device designed to bring professional Blackstar tones directly to your headphones.

Step into a world-class studio - anytime, anywhere. The BEAM: Solo redefines the headphone amp experience, delivering Blackstar's signature tone in a compact, intuitive package.
Designed for electric, acoustic, and bass guitar, it sets a new benchmark in sound quality, ease of use, and app integration.
Unlike basic alternatives, our best-in-class mobile app puts photo-realistic amp heads, cabinets, mics, and pedals at your fingertips. Access and contribute to an active online community, where you can download, share, and showcase patches with friends and fellow musicians via social media. Built-in tuner and metronome features ensure you're always in tune and on time, helping you make the most of every session.

The dynamic light beam provides real-time feedback, making tone adjustments clear and precise - with or without the app. The SpeedDial control wheel offers effortless access to core settings for adjusting on the fly, while our XpressFX control streamlines FX adjustments for seamless performance.
Additionally, the BEAM: Solo is the only headphone amp that allows vocal recording, making it a game-changer for musicians looking to capture both their guitar and vocals with ease.
