Need to Know for Retailers

- FLY 3 High Gain is a permanent new variation of the best-selling FLY 3 platform — not a limited edition. It expands the range with a heavier-voiced model for metal, hard rock, punk and modern high-gain players.
- The FLY range is already a proven success story, with over 1 million FLY amps sold worldwide. This gives retailers a strong, familiar platform with a fresh new sales angle.
- More gain was one of the most requested additions to the FLY 3 concept. The new Nitro channel adds an extra high-gain stage for aggressive saturation, tight low-end punch and modern heavy tones.
- The amp keeps the familiar FLY 3 strengths, including compact size, battery operation, Clean and Overdrive channels, ISF tone shaping, delay, Aux input and emulated headphone / line output.
- FLY 3 High Gain has its own darker, more aggressive identity, visually and sonically inspired by Blackstar's Series One Mk II amps, and can be paired with the optional FLY 103 extension cabinet for a 6W stereo mini rig.

Description

Designed for metal, hard rock and punk players, the Fly High Gain takes the iconic Blackstar Fly platform into heavier territory. Expanding the original two-channel design, it introduces a powerful third channel – Nitro – delivering aggressive high-gain tones with a built-in noise gate to keep everything tight and controlled.

The familiar Clean and Overdrive channels provide the classic Fly tones players already know, while the patented ISF control lets you shape your sound from a tight American-style response through to a mid-focused British voice. A built-in analogue-style delay adds depth to solos, and the custom 3” speaker with sealed cabinet design delivers surprisingly big sound from such a compact amp.

With over 1 million Fly amps sold worldwide, the Fly range has proven that great guitar tone can come from a truly portable amplifier. Fly High Gain runs on batteries for playing anywhere, features an emulated headphone output for silent practice or recording, and can be paired with the optional Blackstar FLY 103 extension cabinet to create a larger stereo mini rig.
