- Buffered FX loop for seamless external pedal integration
- Stylish, compact design with high-power output
- Simple and intuitive control without requiring external software
- Development and Design by Blackstar UK

Description

The Blackstar IDX:50 is a high-power digital combo amplifier designed for guitarists seeking professional tone, intuitive control, and seamless connectivity in a compact format. Featuring a built-in display, it allows for easy navigation, real-time feedback, and deep editing of effects—without requiring an external app.

With six amp voices, ranging from crystal-clear cleans to rich crunch and high-gain tones, the IDX:50 offers exceptional versatility for players of all styles. The amp is equipped with over 35 built-in effects, each selectable and adjustable directly via the screen, with up to four individual parameters per effect for precise customization.

For professional performance and recording, the IDX:50 includes CabRig technology, providing USB-C and ¼" jack connectivity for direct output control. Guitarists can also select their preferred EL84, EL34, or 6L6 response settings, emulating classic valve amp feel and tone.

The Line In / Streaming capability, enabling direct-to-phone TRRS audio for high-quality livestreaming and video recording, making content creation simple and intuitive.

With foot-switchable controls, an intuitive 4-band EQ, selectable power modes (1W/10W/50W), and sleek modern design, the IDX:50 delivers premium sound, unmatched versatility, and effortless usability—all in one powerful amplifier.
