Product Description

Studio 10 KT88

Studio 10 KT-88 is driven by the monumental KT-88 power amp valve and an ECC83 in the preamp stage. Benefitting from the extra headroom of the KT-88, the Studio 10 KT-88 is the pinnacle of dynamic modern cleans and tight high-gain overdrives. In addition, the patented ISF control gives unparalleled access to more distortion flexibility than any other single-ended valve amplifier on the market.

Studio 10 Series

Influenced by history's most iconic amplifiers, three new 10W single-ended valve amplifiers have been developed each with a different power valve: KT88, EL34, or 6L6.

The feel, dynamics and natural compression of these small single-ended valve amps has to be experienced. The instant response and feedback you get when playing, create a direct connection between your fingers and the speaker and fuel your performance.

The Studio 10's simple controls allow you to quickly and easily dial in classic tones. From chimy cleans to musical, smooth overdrives that clean up beautifully when you roll off your guitar volume. At 10 Watts they each deliver stunning tone even at low volumes.

To capture the true sonic experience of the power valves driving or breaking up when driven the Emulated Output is taken after the power stage. Every nuance of your sound can be easily recorded or run through a PA for larger venues.

With a seamless blend of classic tone and boutique-inspired design, each amplifier takes its place alongside some of the world's most revered studio amplifiers.
