

# starlight

**Starlight** is a **smooth** and **liquid fuzz-distortion** made for soloing. A combination of cascaded JFET and MOSFET gain stages provide a **huge gain range** that you can easily control from your guitar's volume. A properly designed circuit gives the right amount of **sagging distortion and sustain for days**.

Controls:

**Bypass Footswitch:** True bypass your effect.

**Gain:** From 7 to 9 o'clock you get an open sounding overdrive. As you turn the knob clockwise the sound gets darker and heavier.

**Tone:** Control the presentation of your sound in the whole mix.

**Volume:** Set your effect level according to the bypassed.

**Voicing Toggle Switch:** Boost upper-mid frequencies and add gain (up position).

Built with the **highest quality components** available, features **true bypass**, operates with **9V battery** or external 9V DC regulated power supply (**- center, + ring**). Max current consumption 1.8 mA. Using a power supply of +15V DC may cause severe damage to the pedal and void warranty.

When not in use unplug guitar cord from input jack to save battery life. To change the battery unscrew the bottom plate.

**Warranty:** **Starlight** comes with **5 years warranty** for all internal parts.
